## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 2, 4 – 6, and 8 – 21 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Liu et al. shows a MEM switch comprising a substrate and beam (44/46) with a spring type contact unit (40) electrically in contact with the beam and formed on a signal line (34 or 36) but does not show the spring type contact unit formed as a curve flip spring where in view of Applicant's specification, the spring contact unit of Liu et al. is shown formed integrally with the beam and does not flip and where the spring contact as further formed as a beam and is not curved (claim 1); where the contact unit is formed of metal and not amorphous silicon, where only the beam of Liu et al. is formed of silicon (claim 5); where Liu et al. does not show or suggest the contact unit being domed shaped with a through-hole formed at the top portion (claim 6); where the beam (44/46) does not make electrical contact to the first and second signal lines when deformed, where spring contact 40 is a shorting bar (claim 12); nor would it be obvious to combine the prior art to meet the limitations of the claims, thus the claims are found allowable.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Liu et al. – shows a MEM switch.
